1. Is the Python Standard Library included with PyInputPlus?
   Yes
2. Why is PyInputPlus commonly imported with import pyinputplus as pypi?
   The as pyip code in the import statement saves us from typing pyinputplus each time we want to call a PyInputPlus function. Instead we can use the shorter pyip name.

3. How do you distinguish between inputInt() and inputFloat()?
   Prompts the user to enter an integer value. Returns the integer as an int value.
   Prompts the user to enter a floating point number value. Returns the number as a float.
4. Using PyInputPlus, how do you ensure that the user enters a whole number between 0 and 99?
    inputInt(min=0, Max=99)
5. What is transferred to the keyword arguments allowRegexes and blockRegexes?
   The allowRegexes and blockRegexes keyword arguments take a list of regular expression strings to determine what the PyInputPlus function will accept or reject as valid input.
6. If a blank input is entered three times, what does inputStr(limit=3) do?
   Limit = 3,will ensure that the user only has 3 tries to provide a correct answer. If the user answers incorrectly more than 3 times, it raises a RetryLimitException exception.
7. If blank input is entered three times, what does inputStr(limit=3, default='hello') do?
    It will return 'hello' after 3 attempts of input failure.
